## CHAPTER 1 LINEAR SPACES

	PAGE
1 LINEAR SPACES . . . . .	1
Bases, dimension, linear functions, products, direct sums, projective and inductive limits.	
PROBLEMS . . . . .	11
A Cardinal numbers; B Quotients and subspaces; C Di- rect sums and products; D Space of bounded functions; E Extension of linear functionals; F Null spaces and ranges; G Algebraic adjoint of a linear mapping; H Set functions; I Inductive limits	
2 CONVEXITY AND ORDER . . . . .	13
Convex sets, Minkowski functionals, cones and partial or- derings.	
PROBLEMS . . . . .	17
A Midpoint convexity; B Disjoint convex sets; C Min- kowski functionals; D Convex extensions of subsets of finite dimensional spaces; E Convex functionals; F Families of cones; G Vector orderings of $R^2$ ; H Radial sets; I $Z - A$ dictionary ordering; J Helly's theorem	
3 SEPARATION AND EXTENSION THEOREMS . . . . .	18
Separation of convex sets by hyperplanes, extension of linear functionals preserving positivity or preserving a bound.	
PROBLEMS . . . . .	23
A Separation of a linear manifold from a cone; B Alterna- tive proof of lemma 3.1; C Extension of theorem 3.2; D Example; E Generalized Hahn-Banach theorem; F Gen- eralized Hahn-Banach theorem (variant); G Example on non-separation; H Extension of invariant linear functionals	

## CHAPTER 2 LINEAR TOPOLOGICAL SPACES

4 TOPOLOGICAL SPACES . . . . .	27
Brief review of topological notions, products, etc.	

	PAGE
PROBLEMS . . . . .	32
A Compact and locally compact spaces; B Separability; C Complete metric spaces; D Hausdorff metric on a space of subsets; E Contraction mapping	
5 LINEAR TOPOLOGICAL SPACES, LINEAR FUNCTIONALS, QUO- TIENT AND PRODUCTS . . . . .	33
Local bases, continuity of linear functions, product and quo- tient spaces.	
PROBLEMS . . . . .	41
A Exercises; B Natural, non-vector topologies; C Pro- jective topology; D Attempt at a strongest vector topology; E Strongest vector topology I; F Box topology; G Alge- braic closure of convex sets I; H Linearly closed convex sets I; I Locally convex sets	
6 NORMABILITY, METRIZABILITY, AND EMBEDDING; LOCAL CONVEXITY . . . . .	43
Embedding in normed spaces, metrizable spaces, and in products of pseudo-normed spaces.	
PROBLEMS . . . . .	51
A Exercises; B Mappings in pseudo-normed spaces I; C Topologies determined by pseudo-metrics; D Products and normed spaces; E Positive linear functionals; F Locally convex, metrizable, non-normable spaces; G Topology of pointwise convergence; H Bounded sets and functionals; I Strongest locally convex topology I; J Inner products; K Spaces of integrable functions I; L Spaces of measurable functions I; M Locally bounded spaces; N Spaces of in- tegrable functions II	
7 COMPLETENESS . . . . .	56
Completeness and total boundedness, characterization of finite dimensional spaces, completion.	
PROBLEMS . . . . .	64
A Finite dimensional subspaces; B Completion of a pseudo- metrizable, pseudo-normable, or locally convex space; C Com- pleteness for stronger topologies; D Extension of a one-to-one mapping; E Complementary subspaces; F Totally bounded sets; G Topologies on a direct sum; H Hilbert spaces; I Hilbert spaces: Projection; J Hilbert spaces: Orthogonal complements; K Hilbert space: Summability; L Hilbert spaces: Orthonormal bases; M Spaces of integrable func- tions III; N Spaces of measurable functions II; O The sum of closed subspaces	

	PAGE
8 FUNCTION SPACES . . . . .	68
Uniform convergence on the members of a family, completeness, equicontinuity, compactness and countable compactness.	
PROBLEMS . . . . .	79
A Converse of 8.1; B Mappings in pseudo-normed spaces II; C Pointwise Cauchy nets; D Product of $\mathcal{F}_A$ and $\mathcal{F}_B$ ; E Functional completion; F Additive set functions; G Boundedness in $B_A$ ; H Compactness of sets of functions; I Spaces of continuous functions I; J Distribution spaces I	
 CHAPTER 3 THE CATEGORY THEOREMS	
9 CATEGORY IN TOPOLOGICAL SPACES . . . . .	84
Condensation theorem, Baire category theorem, Osgood's theorem on point of equicontinuity.	
PROBLEMS . . . . .	87
A Exercise on category; B Preservation of category; C Lower semi-continuous functions; D Generalized Baire theorem; E Embedding of a finite dimensional compact metric space into an Euclidean space; F Linear space of dimension $\aleph_0$ ; G Image of a pseudo-metrizable linear space; H Additive set functions; I Sequential convergence in $L^1(X, \mu)$	
10 THE ABSORPTION THEOREM AND THE DIFFERENCE THEOREM	90
PROBLEMS . . . . .	95
A Continuity of additive mappings; B Subspaces of the second category; C Linear spaces with pseudo-metrizable topology; D Midpoint convex neighborhoods; E Sets of sequential convergence; F Problems in topological completeness and metric completion	
11 THE CLOSED GRAPH THEOREM . . . . .	97
Closed graph theorem and open mapping theorem.	
PROBLEMS . . . . .	100
A Comparison of topologies; B Subspace of $L^p \cap L^q$ ; C Symmetric operators; D An open mapping theorem; E Closed relation theorem; F Continuously differentiable functions; G Mappings into the space $L^1$ ; H Condition for a closed graph; I Closed graph theorem for metrizable spaces?; J Continuity of positive linear functionals	
12 EQUICONTINUITY AND BOUNDEDNESS . . . . .	102
Elementary properties, uniform boundedness, Banach-Steinhaus theorem.	
PROBLEMS . . . . .	105
A Boundedness of norms of transformations; B The principle of condensation of singularities; C Banach-Steinhaus	

theorem; D Strongest locally convex topology II; E Closed graph theorem I; F Continuous functions non-differentiable on sets of positive measure; G Bilinear mappings

CHAPTER 4 CONVEXITY IN LINEAR TOPOLOGICAL SPACES

13	CONVEX SUBSETS OF LINEAR TOPOLOGICAL SPACES . . . . .	110
	Interior, closure, linear combinations of convex sets, closed convex extensions of totally bounded sets, continuous functionals on convex sets.	
	PROBLEMS . . . . .	114
	A Midpoint convexity; B Condensation corollary; C Convex extension of bounded and totally bounded sets; D Translates of convex sets; E Extension of open convex sets; F Hypercomplete spaces; G Closed graph theorem II	
14	CONTINUOUS LINEAR FUNCTIONALS . . . . .	117
	Existence and extension of continuous linear functionals, adjoint of subspaces, quotient spaces, products and direct sums.	
	PROBLEMS . . . . .	123
	A Exercises; B Further separation theorems; C A fixed point theorem; D Strongest locally convex topology III; E Strongest vector topology II; F Algebraic closure of convex sets II; G Linearly closed convex sets II; H A fundamental theorem of game theory; I Complex measures; J Spaces of continuous functions II; K Space of convergent sequences; L Hilbert spaces II; M Spaces of integrable functions IV	
15	EXTREME POINTS . . . . .	130
	The Krein-Milman theorem.	
	PROBLEMS . . . . .	132
	A A bounded set with no extreme point; B Existence of extreme points; C Extreme image points; D Maximum of a linear functional; E Subsets of a compact convex set; F Two counter-examples; G Extreme half lines; H Limits and extreme points; I Extreme points in $L^1$ and $L^\infty$ ; J Extreme points in $C(X)$ and its adjoint	

CHAPTER 5 DUALITY

16	PAIRINGS . . . . .	137
	Paired spaces, weak topologies, polars, compactness criteria, completeness relative to uniform convergence on the members of a family, subspaces, quotients, direct sums, and products.	

	PAGE
PROBLEMS . . . . .	148
A Duality between totally bounded sets; B Polar of a sum; C Inductive limits II; D Projective limits; E Duality between inductive and projective limits; F Sequential convergence in $L^1(X, \mu)$ II; G Dense subspaces; H Helly's condition; I Tensor products I	
17 THE WEAK TOPOLOGIES . . . . .	153
Weak and weak* topologies, weak compactness, subspaces, quotients, products, and direct sums.	
PROBLEMS . . . . .	161
A Exercises; B Total subsets; C Uniformly convex spaces I; D Vector-valued analytic functions; E Stone-Weierstrass theorem; F Completeness of a direct sum; G Inductive limits III; H Integration proof of theorem 17.11; I Weakly compact convex extensions; J Weak* separability; K Helly's choice principle; L Existence of weakly convergent sequence	
18 TOPOLOGIES FOR $E$ AND $E^*$ . . . . .	165
Admissible topologies, strong topology, equicontinuous, weak* compact, strong bounded and weak* bounded sets, barrelled spaces, topologies yielding a given dual, Mackey spaces, products, sums, etc.	
PROBLEMS . . . . .	176
A Exercises; B Characterization of barrelled spaces; C Extension of the Banach-Steinhaus theorem; D Topologies admissible for the same pairing; E Extension of the Banach-Alaoglu theorem; F Counter-example on weak* compact sets; G Krein-Smulian theorem; H Example and counter-example on hypercomplete spaces; I Fully complete spaces; J Closed graph theorem III; K Spaces of bilinear mappings; L Tensor products II	
19 BOUNDEDNESS . . . . .	180
Bound topologies, products and quotients.	
PROBLEMS . . . . .	188
A Inductive limits IV; B Closed graph theorem IV; C Completeness of the adjoint	
20 THE EVALUATION MAP INTO THE SECOND ADJOINT . . . . .	189
Semi-reflexive, evaluable and reflexive spaces.	
PROBLEMS . . . . .	195
A Example of a non-evaluable space; B An evaluable product; C Converse of 20.7(i); D Counter-example on quotients and subspaces; E Problem; F Montel spaces; G Strongest locally convex topology; H Spaces of analytic functions I; I Distribution spaces II; J Closed graph theorem for a reflexive Banach space; K Evaluation of a normed	

	PAGE
space; L Uniformly convex spaces II; M A nearly reflexive Banach space	
21 DUAL TRANSFORMATIONS . . . . .	199
Existence and uniqueness of duals, continuity and openness relative to admissible topologies, adjoint transformations, continuity and openness.	
PROBLEMS . . . . .	206
A Completely continuous mappings; B Riesz theory; C Complete continuity of the adjoint; D Schauder's theorem; E Closable mappings; F Stone-Čech compactification	
22 PSEUDO-METRIZABLE SPACES . . . . .	209
Boundedness properties, weak* closed convex sets, structure of adjoint space.	
PROBLEMS . . . . .	217
A Condition for completeness; B Embedding theories; C Inductive limits V; D Spaces of analytic functions II; E Spaces $l^p(\omega)$ ; F Köthe spaces; G Counter-example on Fréchet spaces; H An adjoint with a bound topology; I Example on Montel spaces; J Spaces of analytic functions III	
 APPENDIX ORDERED LINEAR SPACES	
23 ORDERED LINEAR SPACES . . . . .	224
Order dual, conditions that a continuous functional belong to order dual, elementary properties of vector lattices, lattice pseudo-norms.	
24 $L$ AND $M$ SPACES . . . . .	236
Kakutani's characterization of Banach lattices which are of functional type or of $L^1$ type.	
BIBLIOGRAPHY . . . . .	248
LIST OF SYMBOLS . . . . .	249
INDEX . . . . .	251
