

# Contents

<i>1</i>	<i>Introduction</i> . . . . .	<i>1</i>
<i>2</i>	<i>Physical and Biological Bases</i> . . . . .	<i>4</i>
2.1	Pressure, Force, Work . . . . .	4
2.2	Composition of Atmospheric Air . . . . .	5
2.3	Absorption and Release of Gas in the Lungs . . . . .	5
2.4	Transport of Gases in the Circulatory System . . . . .	6
2.5	Saturation with Nitrogen While Breathing Air at Normal Pressure . . . . .	8
<i>3</i>	<i>Abnormal Atmosphere</i> . . . . .	<i>9</i>
3.1	Alteration of the Composition of Gases at Normal Pressure . . . . .	9
3.1.1	Hyperoxia . . . . .	9
3.1.2	Replacement of Nitrogen by Helium or Other Inert Gases . . . . .	9
3.1.3	The Pressure Cabin . . . . .	10
3.2	Increased and Reduced Ambient Pressure . . . . .	10
3.2.1	Altitude and Hypoxia . . . . .	10
3.2.2	Equalization of Pressure in the Gas-Filled Spaces, Barotrauma . . . . .	12
3.3	Uptake and Release of Inert Gases by the Tissues . . . . .	14
3.3.1	Half-Value Times, the Mathematical Bases . . . . .	14
3.3.2	Longest Half-Value Time for Nitrogen and Helium in Man . . . . .	14
3.4	Decompression . . . . .	15
3.4.1	“Explosive” Decompression . . . . .	15
3.4.2	Tolerated Partial Pressure of Nitrogen at an Ambient Pressure of 1.0 Bar . . . . .	16
3.4.3	Tolerated Pressure of Nitrogen at Overpressure . . . . .	18

## VIII Contents

3.4.4	Differences Between Nitrogen and Helium and Experimental Bases for the ZH-L <sub>12</sub> System . . .	19
3.4.5	Identification of the Half-Value Times with Tissues .	24
3.5	Calculation of Safe Decompression . . . . .	26
3.5.1	Tolerated Pressure of Inert Gas as Dependent on Half-Value Time and Ambient Pressure . . . . .	26
3.5.2	Twelve Pairs of Coefficients for Sixteen Half-Value Times of Helium and Nitrogen (ZH-L <sub>12</sub> ) . . . . .	26
3.5.3	Comparisons Between Decompression Using ZH-L <sub>12</sub> and the US Navy and Royal Navy Tables After Dives with Air . . . . .	29
3.6	Experimental Experiences with ZH-L <sub>12</sub> . . . . .	32
3.6.1	Exposures with Air . . . . .	33
3.6.2	Exposures with Helium and with Mixed Gases . . . .	34
3.7	Summary of the Arguments for the ZH-L <sub>12</sub> System . .	38
3.8	Rules for the Calculation of Decompression Tables .	40
3.8.1	Decompression Tables and Individual Decompression . . . . .	40
3.8.2	Dives Using Air . . . . .	40
3.8.3	Deep Diving Using Helium and Mixed Gases . . . .	42
3.9	Saturation Diving and Excursions . . . . .	43
3.10	Flying After Diving . . . . .	45
3.11	Testing Decompression Tables . . . . .	52
4	<i>Decompression Sickness</i> . . . . .	53
4.1	Pathogenesis . . . . .	53
4.2	Symptomatology . . . . .	54
4.2.1	Decompression Sickness of the Central Nervous System . . . . .	54
4.2.2	Decompression Sickness of the Skin, Muscles, Bones, and Joints . . . . .	54
4.3	Treatment . . . . .	55
4.3.1	General Rules . . . . .	56
4.3.2	Decompression Sickness of the Central Nervous System . . . . .	57
4.3.3	Decompression Sickness of the Joints and Bones . .	60
4.3.4	Decompression Sickness After Deep Diving with Helium . . . . .	61
4.4	Transport of the Injured Diver . . . . .	62

5	<i>Appendix: Calculation of Low-Risk, Decompression and Decompression Tables . . . . .</i>	63
5.1	Calculation of Inert Gas Pressure in Tissues . . . . .	63
5.2	Decompression Tables for Dives with Air at Various Altitudes . . . . .	67
6	<i>Literature . . . . .</i>	83
7	<i>Subject Index . . . . .</i>	85
