

Contents

1.0 Introduction	1
1.1 Intent and Overview	2
1.2 The Process of Creating Images	2
1.3 Representation or Simulation of Reality	6
2.0 The Illumination Process	9
2.1 Light and Materials	9
2.2 Background Optics and Physics	12
2.2.1 Vector Notation	12
2.2.2 The Wave Nature of Light	14
2.2.3 Illuminating Hemisphere and Solid Angle	15
2.2.4 Intensity and Energy	18
2.2.5 Reflection and Refraction	20
2.2.6 Geometry of a Surface	24
2.2.7 Geometric Attenuation	25
2.3 Surface Illumination	28
2.3.1 Coherent Illumination	28
2.3.2 Incoherent Illumination	32
2.3.2.1 Incoherent Mechanism	34
2.3.2.2 Microfacet Distribution	36
2.3.2.3 Computing Incoherent Illumination	37
2.3.2.4 Ideal Diffuse Illumination	39
2.3.3 Emissive Illumination	40
2.3.4 A Generalized Illumination Expression	40
3.0 Perceptual Response	45
3.1 Describing Color	45
3.2 Colorimetry	47
3.3 Colorimetry and the RGB Monitor	52
3.4 Alternate Color Representations	54
3.5 Color Spaces for Color Computation	55
3.5.1 Computation in RGB	56
3.5.2 Spectral Sampling Approaches	58
3.5.3 Sources of Confusion	61
4.0 Illumination Models	63
4.1 Shading and Illumination Basics	65
4.1.1 Starting from the Eye	67
4.1.2 Starting from the Light	70
4.1.3 Combined Techniques	72
4.2 Incremental Shading, Empirical Models	72

4.2.1	Diffuse Illumination	73
4.2.2	Atmospheric Attenuation	75
4.2.3	Specular Highlights	76
4.2.4	Geometric Smoothing	78
4.3	Ray Tracing, Transitional Models	82
4.3.1	Improved Specular Reflection	82
4.3.2	Macroscopic Surface Properties	84
4.3.3	Recursive Reflection and Refraction	88
4.3.4	Distributed Ray Tracing	91
4.4	Radiosity, Analytical Models	95
4.4.1	An Energy Equilibrium Illumination Model	95
4.4.2	Radiosity for Diffuse Environments	99
4.4.3	Radiosity for Specular Environments	103
4.5	Hybrid Techniques	105
4.5.1	View Independent Illumination	106
4.5.2	View Dependent Illumination	108
4.6	Visual Comparison	109
4.7	Summary	114
5.0	Image Display	115
5.1	Image File Considerations	116
5.1.1	Color Correction for Display	117
5.1.2	Gamma Correction for Display	120
5.1.3	Color Clipping and Compressing for Display	125
5.1.4	Image Dither and Patterning	128
5.2	NTSC and RGB Video	132
5.3	Video Setup for Image Display	134
5.4	Monitor Alignment and Calibration	140
5.5	NTSC Limitations	146
5.6	Black and White Display	152
Appendix I	Terminology	155
Appendix II	Controlling Appearance	157
II.1	Surface Character	157
II.1.1	Dielectric Materials	157
II.1.2	Conductive Materials	158
II.1.3	Composite Materials	159
II.1.4	Using Published Spectral Data	160
II.1.5	Selecting K_a , K_d , K_s , F_t , and F_r	161
II.2	Surface Finish	162
Appendix III	Example Code	167
III.1	Geometric Utilities	167
III.1.1	Code Summary	167

III.1.2	Code Source	173
III.2	Hemispherical Integrator	178
III.2.1	Code Summary	178
III.2.2	Code Source	178
III.3	Geometric Attenuation	180
III.3.1	Code Summary	180
III.3.2	Code Source	181
III.4	Microfacet Distributions	183
III.4.1	Code Summary	183
III.4.2	Code Source	186
III.5	Fresnel Approximation	193
III.5.1	Approximation Methodology	194
III.5.2	Code Summary	198
III.5.3	Code Source	199
III.6	Illumination Models	204
III.6.1	Illuminated Surface Description	253
III.6.2	Code Summary	205
III.6.3	Code Source	208
III.7	Color Transformation	221
III.7.1	Material Data	222
III.7.2	Code Summary	223
III.7.3	Code Source	225
III.8	Spectral Sampling	240
III.8.1	Code Summary	241
III.8.2	Code Source	242
III.9	RGB Color Clipping	248
III.9.1	Code Summary	249
III.9.2	Code Source	250
Appendix IV Radiosity Algorithms		253
IV.1	Pseudocode Definition	253
IV.2	Hemi-cube Form Factors	256
IV.3	Specular Radiosity	259
IV.4	Hybrid Form Factors	261
Appendix V Equipment Sources		267
References		271
Index		279
