

## TABLE OF CONTENTS

1. INTRODUCTION .....	1
2. PRIORITY POLLUTANTS	
2.1. Historical Development .....	5
2.2. Metals .....	11
2.3. Organic Chemicals .....	16
2.4. Case Study: Niagara River/Lake Ontario Pollution .....	20
3. ASSESSMENT METHODS	
3.1. Objectives .....	31
3.2. Sampling .....	33
3.3. Correction for Grain Size .....	37
3.4. Assessment of Critical Pools of Pollutants .....	42
3.5. Case Studies: Solid Speciation of Metals in River Sediments .....	48
4. PARTICLE ASSOCIATIONS	
4.1. Particles in Water .....	57
4.2. Factors Influencing Partition Coefficients .....	62
Effects of Phase Separation, Sample Preparation, Grain Size .....	63
Effects of Suspended Particle Concentration .....	64
Source of Contaminant; Residence Time .....	65
Sorption Kinetics .....	66
Non-Linear Sorption, Irreversibility .....	67
Bioconcentration Effects .....	68
4.3. Climatic, Geochemical and Seasonal Variabilities of K <sub>D</sub> -Factors .....	69
4.4. Case Study: Rhine River .....	71
5. TRANSFER PROCESSES	
5.1. In-Situ Processes .....	81
5.2. Mobilization of Pollutants .....	85
5.3. Metal Transfer between Inorganic and Organic Substrates ..	89
5.4. Transfer to Biota .....	92
5.5. Case Study: Mobilization of Cadmium from Tidal River Sediments .....	96
6. ENVIRONMENTAL IMPACT	
6.1. Biological Effects - Bioassays .....	105
6.2. Pollution Indices .....	108
6.3. Long-Term Prognosis on Groundwater Quality .....	112
6.4. Sediment Quality Criteria .....	117
6.5. Case Study: Sediment Quality Triad on Puget Sound, Washington .....	122
7. DREDGED MATERIALS	
7.1. Introduction .....	129
7.2. Environmental Impact of Dredging Operations .....	131
7.3. Disposal of Dredged Materials .....	133
7.4. Treatment of Strongly Contaminated Sludges .....	139
7.5. Case Study: Dredged Material from Rotterdam Harbor .....	143
Subject Index .....	151
