Preface

vii

PART I: MECHANICAL PROPERTIES OF MATERIALS

1	The First Materials (Stone Age and Copper–Stone Age)	3
2	Fundamental Mechanical Properties of Materials	12
3	Mechanisms	24
3.1	The Atomic Structure of Condensed Matter	24
3.2	Binding Forces Between Atoms	26
3.3	Arrangement of Atoms (Crystallography)	31
3.4	Plasticity and Strength of Materials	47
3.5	Summary	61
3.6	Concluding Remarks	62
4	The Bronze Age	66
5	Alloys and Compounds	74
5.1	Solid Solution Strengthening	74
5.2	Phase Diagrams	75
5.3	Precipitation Hardening (Age Hardening)	89
5.4	Dispersion Strengthening	95
5.5	Grain Size Strengthening	96
5.6	Control of Strength by Casting	97
5.7	Concluding Remarks	99

6	Atoms in Motion	102
6.1	Lattice Defects and Diffusion	102
6.2	Diffusion in Ceramics and Polymers	114
6.3	Practical Consequences	115
6.4	Closing Remarks	121
7	The Iron Age	123
8	Iron and Steel	138
8.1	Phases and Microconstituents	138
8.2	Hardening Mechanisms	139
8.3	Heat Treatments	141
8.4	Alloyed Steels	146
8.5	Cast Irons	147
8.6	Closing Remarks	149
9	Degradation of Materials (Corrosion)	151
9.1	Corrosion Mechanisms	151
9.2	Electrochemical Corrosion	155
9.3	Practical Consequences	161
9.4	Degradation of Polymers and Glass	163
 PART II: ELECTRONIC PROPERTIES OF MATERIALS		
10	The Age of Electronic Materials	169
11	Electrical Properties of Materials	180
11.1	Conductivity and Resistivity of Metals	182
11.2	Conduction in Alloys	188
11.3	Superconductivity	189
11.4	Semiconductors	191
11.5	Conduction in Polymers	200
11.6	Ionic Conductors	204
11.7	Thermoelectric Phenomena	206
11.8	Dielectric Properties	208
11.9	Ferroelectricity and Piezoelectricity	213
12	Magnetic Properties of Materials	217
12.1	Fundamentals	217
12.2	Magnetic Phenomena and Their Interpretation	221
12.3	Applications	229

13	Optical Properties of Materials	239
13.1	Interaction of Light with Matter	239
13.2	The Optical Constants	241
13.3	Absorption of Light	246
13.4	Emission of Light	253
13.5	Optical Storage Devices	261
14	Thermal Properties of Materials	265
14.1	Fundamentals	265
14.2	Interpretation of the Heat Capacity by Various Models	269
14.3	Thermal Conduction	272
14.4	Thermal Expansion	276
PART III: MATERIALS AND THE WORLD		
15	No Ceramics Age?	281
15.1	Ceramics and Civilization	281
15.2	Types of Pottery	284
15.3	Shaping and Decoration of Pottery	288
15.4	The Science Behind Pottery	290
15.5	History of Glass-Making	296
15.6	Scientific Aspects of Glass-Making	301
15.7	Cement, Concrete, and Plaster	309
15.8	Closing Remarks	311
16	From Natural Fibers to Man-Made Plastics	314
16.1	History and Classifications	314
16.2	Production and Properties of Natural Fibers	321
16.3	Tales About Plastics	333
16.4	Properties of Synthetic Polymers	342
17	Gold	350
18	Economic and Environmental Considerations	355
18.1	Price	355
18.2	Production Volumes	357
18.3	World Reserves	358
18.4	Recycling and Domestic Waste	362
18.5	Substituting Rare Materials	371
18.6	Efficient Design and Energetic Considerations	372
18.7	Safety	373

19 What Does the Future Hold? 375

Appendices

I.	Summary of Quantum Number Characteristics	383
II.	Tables of Physical Constants	385
III.	Periodic Table of the Elements	389
IV.	Solutions to Selected Problems	390

Index 395
