

Jean-Pierre Serre

Local Algebra

Translated from the French by CheeWhye Chin

Springer

Contents

Preface	v
Contents	vii
Introduction	xi
I. Prime Ideals and Localization	1
§1. Notation and definitions	1
§2. Nakayama's lemma	1
§3. Localization	2
§4. Noetherian rings and modules	4
§5. Spectrum	4
§6. The noetherian case	5
§7. Associated prime ideals	6
§8. Primary decompositions	10
II. Tools	11
A: Filtrations and Gradings	11
§1. Filtered rings and modules	11
§2. Topology defined by a filtration	12
§3. Completion of filtered modules	13
§4. Graded rings and modules	14
§5. Where everything becomes noetherian again — q -adic filtrations	17
B: Hilbert-Samuel Polynomials	19
§1. Review on integer-valued polynomials	19
§2. Polynomial-like functions	21
§3. The Hilbert polynomial	21
§4. The Samuel polynomial	24

III. Dimension Theory	29
A: Dimension of Integral Extensions	29
§1. Definitions	29
§2. Cohen-Seidenberg first theorem	30
§3. Cohen-Seidenberg second theorem	32
B: Dimension in Noetherian Rings	33
§1. Dimension of a module	33
§2. The case of noetherian local rings	33
§3. Systems of parameters	36
C: Normal Rings	37
§1. Characterization of normal rings	37
§2. Properties of normal rings	38
§3. Integral closure	40
D: Polynomial Rings	40
§1. Dimension of the ring $A[X_1, \dots, X_n]$	40
§2. The normalization lemma	42
§3. Applications. I. Dimension in polynomial algebras	44
§4. Applications. II. Integral closure of a finitely generated algebra	46
§5. Applications. III. Dimension of an intersection in affine space	47
IV. Homological Dimension and Depth	51
A: The Koszul Complex	51
§1. The simple case	51
§2. Acyclicity and functorial properties of the Koszul complex	53
§3. Filtration of a Koszul complex	56
§4. The depth of a module over a noetherian local ring ...	59
B: Cohen-Macaulay Modules	62
§1. Definition of Cohen-Macaulay modules	63
§2. Several characterizations of Cohen-Macaulay modules	64
§3. The support of a Cohen-Macaulay module	66
§4. Prime ideals and completion	68
C: Homological Dimension and Noetherian Modules	70
§1. The homological dimension of a module	70
§2. The noetherian case	71
§3. The local case	73

D: Regular Rings	75
§1. Properties and characterizations of regular local rings	75
§2. Permanence properties of regular local rings	78
§3. Delocalization	80
§4. A criterion for normality	82
§5. Regularity in ring extensions	83
Appendix I: Minimal Resolutions	84
§1. Definition of minimal resolutions	84
§2. Application	85
§3. The case of the Koszul complex	86
Appendix II: Positivity of Higher Euler-Poincaré Characteristics	88
Appendix III: Graded-polynomial Algebras	91
§1. Notation	91
§2. Graded-polynomial algebras	92
§3. A characterization of graded-polynomial algebras	93
§4. Ring extensions	93
§5. Application: the Shephard-Todd theorem	95
V. Multiplicities	99
A: Multiplicity of a Module	99
§1. The group of cycles of a ring	99
§2. Multiplicity of a module	100
B: Intersection Multiplicity of Two Modules	101
§1. Reduction to the diagonal	101
§2. Completed tensor products	102
§3. Regular rings of equal characteristic	106
§4. Conjectures	107
§5. Regular rings of unequal characteristic (unramified case)	108
§6. Arbitrary regular rings	110
C: Connection with Algebraic Geometry	112
§1. Tor-formula	112
§2. Cycles on a non-singular affine variety	113
§3. Basic formulae	114
§4. Proof of theorem 1	116
§5. Rationality of intersections	116

§6. Direct images 117
§7. Pull-backs 117
§8. Extensions of intersection theory 119
