Third International Conference on

Spacecraft Propulsion

10-13 October 2000

Cannes, France

Organised by:

Le Centre National d’Etudes Spatiales (CNES)

and

The European Space Agency (ESA)
Contents

Opening Session

Welcoming Speech .................................................................................................................. 3
A. Rolfo

Opening Speech ...................................................................................................................... 5
C. Stavrinidis

NASA Technology Investments in Electric Propulsion: New Directions ......................... 7
in the New Millennium
J. Sankovic et al.

Electric Propulsion Subsystem Development and Application in Russia ..................... 21
G. Popov et al.

An Overview of Electric and Advanced Propulsion Activities in Japan ......................... 27
K. Komurasaki et al.

Chemical Spacecraft Propulsion in ESA: Current Activities ........................................ 41
I. Kälsch

European Activities in Electric Propulsion ......................................................................... 49
G. Saccoccia

An Overview of the CNES Propulsion Program ................................................................. 65
A. Cadiou

Electric and Chemical Propulsion at Alcatel Space ....................................................... 73
P. Garnero et al.

Electric Propulsion Activities for Eurostar 3000 .......................................................... 81
J-M. Stephan

Session 1: Chemical Propulsion Systems

The Design, Development and In-orbit Performance of a Propulsion System .............. 91
for The SNAP-1 Nanosatellite
D. Gibbon et al.

The Propulsion Subsystem of the CNES Microsatellite Product Line ....................... 99
R. Salomé

Suppression of Propellant Shift in the Cluster II Propulsion Subsystem ....................... 107
M. Griffiths
Spacecraft Propulsion Systems - An Overview of Fiat Avio Activities .................................................. 117
L. De Rose et al.

MON and MMH Pressure Surges for a Simplified Propellant Feed System ............................................. 125
C. Leca et al.

Propellant Gauging Method Applied on Astrium SAS Telecommunication Satellite .................................. 131
L. Brouard et al.

Hydrazine Propulsion Systems with a Micropump ....................................................................................... 139
F. Dugué et al.

A Generic Approach for Propulsion System Simulation.
Application to Astrium Projects ............................................................................................................. 147
P. Chéoux-Damas et al.

ESA Online Propulsion System and Component Database ..................................................................... 155
J. Herholz et al.

Session 2: Electric Propulsion Systems

Plasma Propulsion Subsystem Lifetest – Alcatel ....................................................................................... 167
X. Ragot and N. Mattei

Numerical Simulation of Xenon Mass Transfer ......................................................................................... 173
S. d’Halewyn et al.

Space Propulsion Activities at Centrospazio ............................................................................................. 179
M. Andrenucci

Researching of Electric Propulsion Quick Start Problem
for a Spacecraft Orientation System
A. Loyan et al.

Session 3: Advanced Propulsion Concepts

A Fusion Propulsion System for Rapid Deep Space Missions ................................................................ 191
T. Kammash

Single and Opposed-cavity Solar Thermal Thrusters Made of Single Crystal Tungsten ................. 195
H. Sahara et al.

Low-Power Solid-State Microwave Thruster Systems ............................................................................... 203
M. Micci

Numerical Computation of CW-laser Thruster Flows .............................................................................. 211
P. Molina-Morales et al.
The Concept of a Rocket Engine Using CO$_2$/Metal Propellant for Mars Sample Return Missions
I. Gökalp and E. Shafirovich

New Generation of Silicon Based Microthrusters for Space Application
C. Rossi et al.

Space Propulsion by Laser for the Future
A. Lebêhot et al.

Session 4.1: Chemical Thrusters

Earth Storable Bipropellant Thrusters for Geostationary Spacecraft
G. Madhavan Nair et al.

Development of a Low-Cost 22N Thruster
U. Gotzig

Catalytic Decomposition of Different Monopropellants
R. Eloirdi et al.

Characterization in Endurance of the SNECMA IN Hydrazine Thruster
C. Pavoine et al.

Properties of Supersonic Cold Gas Jets for Space Probe Moving
A. Lebêhot et al.

Session 4.2: Hall Thrusters

An Overview of Plasma oscillations in Hall Thrusters
E. Choueiri

Investigations of Low Frequency Oscillation Phenomena in a Hall Thruster
T. Miyasaka et al.

Transients During Stationary Plasma Thruster Start-Up
B. Arkhipov et al.

Transient Excitation and Behavior of a Closed Electron Drift Plasma Thrusters
M. Prioul et al.

1-D Performance Analysis of a Hall Thruster
E. Ahedo et al.

Recent Results on Plasma Thrusters In France
M. Lyszyk et al.

K. Kirdyashev

The SMART-1 Electric Propulsion Diagnostic Package ........................................................................ 661
G. Matticari et al.

The Estimation of the Torque and Forces Arising due to Interaction of the Exhaust Plume with S/C Body ............................. 669
A.G. Korsun

Plasma Plume/Spacecraft Interaction. State of the Art in Investigation Methodology ............................. 675
E. Tverdokhlebova and A.G. Korsun

Modelling and Experimental Verification of Hall and Ion Thrusters at ESTEC ........................................ 683
M. Tajmar et al.

Plume Effects in Plasma Propulsion, an Overview of CNES Activities .................................................. 693
F. Darnon

Session 7: Applications to New Missions

Electric Propulsion for ESA Scientific and Earth Observation Missions ................................................. 703
J. Gonzalez et al.

Toward a Unified System Design for Future Missions with Electric Propulsion ...................................... 711
S. Geffroy et al.

Advanced Hall Electric Propulsion for Future In-Space Transportation ................................................ 717
S. Oleson and J. Sankovic

Preliminary Design of a Multi-purpose Space Platform for Missions to the Sun, Internal Planets of Solar System ................................................................. 727
A. Glukhov

Control Strategies for Orbit Maintenance of Leo Small Satellites with FEEP ........................................ 733
S. Marcuccio et al.

FEEP Propulsion System for Microsatellites ......................................................................................... 741
P. Bianco

RITA for Drag Compensation on GOCE ............................................................................................... 749
H. Bassner et al.

Application of Pulsed Plasma Thrusters for Small Satellites ............................................................... 757
N. Antropov et al.

Development of Propulsion Units for Small Spacecraft ........................................................................ 763
B. A. Arkhipov et al.
The GRACE Cold Gas Attitude and Orbit Control System ........................................ 769
M. Schelkle

Session 8: In-flight Experience

TDF2 Satellite Propulsion System Passivation ................................................. 779
N. Pillet et al.

Session 9: Ground Testing

Ion Energy, Ion Velocity and Thrust Vector Measurements for the SPT-140 Hall Thruster
J. Pollard and E. Beiting
Laser Induced Fluorescence Measurements in Xenon Plasma Thrusters .................... 797
N. Dorval et al.
A High Power Electric Propulsion Test Facility .............................................. 799
M. Andrenucci et al.
Development of a Thrust Balance in the Micronewton Range .................................. 807
J.P. Marque et al.

Poster session

Numerical Modeling of the Behaviour of High Pressure Vessel Under an Hypervelocity Impact
C. Maveyraud et al.
The Advanced Propulsion Concept of Minimal Cost Flights in Both Close and Deep Space
V. Vinogradov and V. Murashko
Impact of Near Wall Processes on Performance of Hall Thruster ......................... 825
A. Zhakupov et al.
Hall Thruster with a Sectioned Conducting Channel ......................................... 827
A. Zhakupov et al.
Predicting Life of Kapton Coating Impinged by SPT Plasma Jet ......................... 829
V. Arbatsky
Experimental Investigation of the Alternative Propellants for Stationary Plasma Thruster .... 833
S. Khartov et al.
Reactivity in Phase Vapor of Methylhydrazine in Synthetic Air ......................................................... 837  
H. Delalu et al.

Theoretical Design of Arcjet Nozzle for Effective Gas Acceleration ....................................................... 841  
A. Rybakov and S. Nesterenko

Distribution of Liquid Droplet Phase in Low-thrust Rocket Engine Plumes ............................................. 845  
A. Nadiradze

Microwave Diagnostics of Plasma-wall Interaction in SPT Accelerating Chamber ..................................... 849  
K. Kirdyashev and V. Brukhyt

Analysis of Factors Influencing the SPT Starting Discharge Process ...................................................... 855  
S. Oghienko and A. Rybakov

Particle Simulation of the Main Chamber of a Kaufman-type Ion Thruster .............................................. 861  
M. Jugroot and J. Harvey

Investigation of Local Plasma Parameter Distributions Along the SPT ..................................................... 865  
Accelerating Channel Under Different External Electric Circuit Parameters  
V. Kim et al.

Use of Electric Propulsion for Compensation of Atmospheric Drag ...................................................... 869  
Acceleration During Experiments on Space Materials Science  
A. Feonychev et al.

Measurements of Ion Velocity at the Exit of a Plasma Thruster by “Large” Probe .................................. 873  
A. Bugrova et al.

Spectral Characteristics of SPT-ATON Plasma Radiation ........................................................................... 877  
A. Bishaev et al.

Investigation of Plasma Local Parameters in Near-Wall Field of .............................................................. 881  
Channel of Stationary Plasma Thruster of ATON Type (SPT-ATON)  
A. Bugrova et al.

Simplified Two-dimensional Model of Hall Thrusters ................................................................................. 885  
L. Garrigues et al.

Modeling of the Plume of a Stationary Plasma Thruster ........................................................................... 889  
J. Bareilles et al.

Effect of the Plasma Inhomogeneity on Ion Thruster Grid Performance ................................................... 893  
M. Tartz et al.

Measurements of Xenon Ion Velocities of the SPT-140 .............................................................................. 897  
Using Laser Induced Fluorescence  
E. Beiting and J. Pollard
UPS and PPS Effects on Satellites ................................................................. 901  
V. Perrin et al.

Semi-empirical Method for Evaluation of a Xenon Operating Hall Thruster ........................................ 909  
Erosion Rate Through Analysis of its Emission Spectra  
G. Karabadjak et al.

Miniaturized Flow Control Valves ........................................................................ 913  
J. Benoit

Demonstration

A Software Tool for the Performance Evaluation of Spacecraft Propulsion Systems .................. 921  
P. Erichsen

Participants List ........................................................................................................ 931
