Aeronautical Research in Germany
From Lilienthal until Today

With 557 Figures and 24 Tables

Springer
Contents

Part 1  Introduction

Aeronautical Research and Technology
Ernst Heinrich Hirschel .................................................. 3
Definition, Contents, Background ........................................ 3
Aeronautical Research and Technology During the
More Recent German History ............................................ 9
“Publicity” in Aeronautical Research: Publications and Patents 11
The Contents of the Book .................................................. 14
References ................................................................. 15

Part 2  The Political, Institutional and Industrial Environment
of German Aeronautical Research

Aeronautical Research Comes into Being During the Time of the Empire
Hans Fabian ................................................................. 19
From the Beginnings to Lilienthal ....................................... 19
Inventor, Researcher and Businessman Otto Lilienthal ................. 21
First Flight Engines as Propulsive Power Sources ....................... 24
The Controllable Airship – The Dirigible ................................ 24
Powered Flight .................................................................. 28
Aluminum, the Material of Aeronautics ................................. 31
The Beginnings of Institutionalized Aeronautical Research –
the Roots of Scientific Aerodynamics ................................ 31
Promotion of Flight and Foundation of the First Aircraft Companies 35
Aeronautical Research Obtains its Structure ......................... 40
Aeronautical Research During the Time Period 1912 to 1914 ......... 43
The Turning Point: World War One 1914 to 1918 .................... 47
## Contents

**The Difficult Situation of Aeronautical Research and the Aeronautical Industry During the Weimar Republic, 1919–1932**  
*Hans Fabian* .................................................. 52

- The Transition to Peace .................................. 53
- The Versailles Treaty, Restrictions and Inflation, 1920 to 1923 .......... 55
- The Alternative to Powered Flight: the Sailplane .................. 57
- Air Traffic Stimulates Aeronautical Research .................. 59
- 1924: The New Beginnings of Aeronautical Research ................. 59
- A New Beginning for the Aviation Industry .................. 63
- Until the End of the Weimar Republic 1932 .................. 69

**The High Rating of Aeronautical Research During the Third Reich**  
*Ernst Heinrich Hirschel* ........................................ 71

- Consequences of the Power Seizure for Aeronautical Research .......... 71
- DVL – the German Test Establishment of Aeronautics ................ 73
- AVA – the Aerodynamic Test Establishment .......................... 79
- DFL/LFA – the Newly Founded German Research Establishment of Aeronautics .............................................. 82
- Scientific Societies – From the Scientific Aeronautical Society to the Lilienthal Society ............................................. 85
- The Academic Upgrading of Aeronautical Research and the Problem of Junior Researchers .................................................. 86
- Aeronautical Research During World War Two .................. 87
- The Flight-Test Centers of the Air Force .................. 92
- If you are a Visionary... ........................................ 93

**The Reconstruction of German Aeronautical Research after 1945**  
*Ernst Heinrich Hirschel* ........................................ 99

- Important Applications of Research Results in Post-War Aircraft Design .......... 99
- The New Beginnings of Aeronautical Research Within the Divided Post-War Germany ............................................. 101
- Consolidation of West German Aeronautical Research 1970–1990 .... 117
- New Perspectives Following the German Reunification .................. 122
- Growing International Engagement of German Aeronautical Research ........ 126
- References .................................................. 129

### Part 3 Results of German Aeronautical Research

- From the Beginning to the End of World War Two .................. 135
- Concept and Configuration  .................................. 135
- Visions and First “Flight Vehicles” – the Beginnings are Promoted Nationally  
  *Dieter Schmitt, Horst Prem* .................................. 135
