Material Flow Management
Improving Cost Efficiency and Environmental Performance

With 54 Figures and 16 Tables
## Contents

1 Introduction ...........................................................................................................1  
*Stefan Enzler*

1.1 Brief Description of CARE Research Project ..................2  
1.2 Brief Description of EPM-Kompas Research Project ..........3  
1.3 Brief Description of INTUS Research Project ..................4  
1.4 Brief Description of IC Research Project .........................5  
1.5 Brief Description of StreaM Research Project ...................6  

2 Aspects of Material Flow Management .....................................................7  
*Stefan Enzler*

2.1 The Term “Material Flow Management” .........................8  
2.2 Stakeholders and Networks of Material Flow Management ....9  
   2.2.1 Stakeholders in Material Flow Management ..............9  
   2.2.2 Vertical and Horizontal Co-operations in Material  
        Flow Management (Networking) ..................13  
2.3 Forms of Material Flow Management .........................15  
   2.3.1 Ecological Quality Improvement and Quality Assurance 16  
   2.3.2 Material Flow Related Service and Responsibility ..........16  
   2.3.3 Lifecycle Based Product Optimisation ..................16  
   2.3.4 Product-related Recycling and Disposal ..................16  
2.4 Summary ..................................................17  
References ............................................................................................................18  

3 Computer Aided Resource Efficiency Accounting .................21  
*Timo Busch, Severin Beucker, Andreas Müller*

3.1 Introduction .................................................................................................21  
   3.1.1 Background .................................................................................22  
   3.1.2 Macroeconomic Objective Definition ..................................23  
   3.1.3 Eco-efficiency as a Strategic “Guide Rail”  
        for Enterprises .................................................................24
3.1.4 Data Diversity and Decision Support Systems ........................................... 25
3.2 Methodological Approach .............................................................................. 27
   3.2.1 Definition and Limitations of Resource Efficiency Accounting .................. 27
   3.2.2 Economic Dimension – Process Cost Accounting ...................................... 29
   3.2.3 Ecological Dimension – Material Intensity .............................................. 30
   3.2.4 Eco-efficiency: Objective Function ....................................................... 32
   3.2.5 REA and Data Collection Levels ........................................................... 33
3.3 Case Study: Toshiba Europe .......................................................................... 47
   3.3.1 Initial Situation and Objective ................................................................. 47
   3.3.2 Procedure ............................................................................................ 48
   3.3.3 Results of the Resource Efficiency Accounting at Toshiba ...................... 50
   3.3.4 IT Based and Organisational Implementation of Resource Efficiency Accounting at Toshiba ................................................................. 50
References ........................................................................................................... 53

4 Measuring Environmental Performance with EPM-KOMPAS Software Tool – Material Flow Analysis, Environmental Assessment and Success Control ...................................................... 57
Edeltraud Günther, Susann Kaulich
4.1 Decision Support: The Basic Principle ......................................................... 57
4.2 Willingness and Capability to Perform: Commitment, Competence and Choice .................................................................................................................. 58
4.3 Environmental Performance and Environmental Success: What Should Be Measured? ........................................................................................................... 59
4.4 The EPM-KOMPAS: How Does the Tool Work? ........................................ 64
   4.4.1 Step 1: Input/Output Balance .................................................................... 65
   4.4.2 Step 2: Environmental Assessment and Selection of Master Parameters ................................................................. 66
   4.4.3 In Detail: Environmental Assessment Method for Master Parameter Determination ................................................................. 66
   4.4.4 Steps 3 and 4: Identifying Performance Drivers and Determining Objectives ................................................................. 72
   4.4.5 Steps 5 and 6: Establishing a Process Balance and Selecting Measures ................................................................. 73
   4.4.6 Step 7: Carrying Out the Environmental Success Breakdown and Variance Analysis ................................................................. 74
   4.4.7 In Detail: The Environmental Success Breakdown .................................... 74
