Hannover 2006

Content

PART I Technical Handbook

1	Introduction – buried valleys and the BurVal project.....	3
2	Buried valleys – nature and groundwater interests	11
3	Challenges of mapping buried valleys	21
4	Methods for mapping and characterising buried valleys	31
4.1	Petrophysical characterisation of sediments	31
4.2	Seismic methods.....	33
4.3	Gravimetry	51
4.4	The transient electromagnetic method (TEM)	65
4.5	Geoelectrical methods	77
4.6	Frequency-domain helicopter-borne electromagnetics.....	89
4.7	Ground penetrating radar.....	99
4.8	Borehole logging in hydrogeology	107
4.9	Cone penetration tests (CPT)	123
4.10	Geological models	127
4.11	Groundwater model	133
4.12	Environmental tracers, groundwater age and vulnerability.....	141
4.13	Aquifer vulnerability.....	149
4.14	Aquifer test (pumping test).....	157
4.15	The influence of redox chemistry on groundwater vulnerability	161
5	Investigations in the pilot project areas	167
5.1	Bording Valley	167
5.2	Tyrsting Valley	181
5.3	Rødekro Valley	191
5.4	Ellerbekker Rinne.....	205
5.5	Cuxhavener Rinne	227
5.6	Groningen Valley.....	241
6	Mapping different types of buried valley.....	253

PART II Planning Handbook

1	Introduction	265
2	Mapping buried valleys for planning purposes	267
3	Contamination threats to aquifers in buried valleys.....	271
4	Problems associated with the technical management of waterworks abstracting from buried valleys.....	273
5	Protection of buried valleys from contamination	277
6	Conclusions for protecting groundwater reservoirs in buried valleys	279

Appendix

Appendix A: Bording Valley	283
Appendix B: Tyrsting Valley.....	289

Index	299
