Preface	xi
1 Basics	1
1.1 Smooth Functions	1
1.2 Measures	6
1.2.1 Lebesgue Measure	10
1.3 Integration	12
1.3.1 Measurable Functions	12
1.3.2 The Integral	14
1.3.3 Lebesgue Spaces	20
1.3.4 Product Measures and the Fubini–Tonelli Theorem	21
1.4 The Exterior Algebra	22
1.5 The Generalized Pythagorean Theorem	25
1.6 The Hausdorff Distance and Steiner Symmetrization	33
1.7 Borel and Suslin Sets	42
2 Carathéodory’s Construction and Lower-Dimensional Measures	53
2.1 The Basic Definition	53
2.1.1 Hausdorff Measure and Spherical Measure	55
2.1.2 A Measure Based on Parallelepipeds	56
2.1.3 Projections and Convexity	57
2.1.4 Other Geometric Measures	58
2.1.5 Summary	59
2.2 The Densities of a Measure	61
2.3 A One-Dimensional Example	63
2.4 Carathéodory’s Construction and Mappings	64
2.5 The Concept of Hausdorff Dimension	67
2.6 Some Cantor Set Examples	69
2.6.1 Basic Examples	70
2.6.2 Some Generalized Cantor Sets	72
2.6.3 Cantor Sets in Higher Dimensions	73

3	Invariant Measures and the Construction of Haar Measure	77
3.1	The Fundamental Theorem	78
3.2	Haar Measure for the Orthogonal Group and the Grassmannian	84
3.2.1	Remarks on the Manifold Structure of $G(N, M)$	88
4	Covering Theorems and the Differentiation of Integrals	91
4.1	Wiener's Covering Lemma and Its Variants	91
4.2	The Besicovitch Covering Theorem	99
4.3	Decomposition and Differentiation of Measures	109
4.4	The Riesz Representation Theorem	115
4.5	Maximal Functions Redux	122
5	Analytical Tools: The Area Formula, the Coarea Formula, and Poincaré Inequalities	125
5.1	The Area Formula	125
5.1.1	Linear Maps	126
5.1.2	C^1 Functions	132
5.1.3	Rademacher's Theorem	134
5.2	The Coarea Formula	137
5.2.1	Measure Theory of Lipschitz Maps	140
5.2.2	Proof of the Coarea Formula	142
5.3	The Area and Coarea Formulas for C^1 Submanifolds	143
5.4	Rectifiable Sets	148
5.5	Poincaré Inequalities	151
6	The Calculus of Differential Forms and Stokes's Theorem	159
6.1	Differential Forms and Exterior Differentiation	159
6.2	Stokes's Theorem	164
7	Introduction to Currents	173
7.1	A Few Words about Distributions	174
7.2	The Definition of a Current	177
7.3	Constructions Using Currents and the Constancy Theorem	183
7.4	Further Constructions with Currents	189
7.4.1	Products of Currents	189
7.4.2	The Pushforward	190
7.4.3	The Homotopy Formula	193
7.4.4	Applications of the Homotopy Formula	193
7.5	Rectifiable Currents with Integer Multiplicity	195
7.6	Slicing	204
7.7	The Deformation Theorem	211
7.8	Proof of the Unscaled Deformation Theorem	217
7.9	Applications of the Deformation Theorem	222

8	Currents and the Calculus of Variations	225
8.1	Proof of the Compactness Theorem	225
8.1.1	Integer-Multiplicity 0-Currents	226
8.1.2	A Rectifiability Criterion for Currents	231
8.1.3	MBV Functions	232
8.1.4	The Slicing Lemma	237
8.1.5	The Density Lemma	238
8.1.6	Completion of the Proof of the Compactness Theorem	240
8.2	The Flat Metric	241
8.3	Existence of Currents Minimizing Variational Integrals	244
8.3.1	Minimizing Mass	244
8.3.2	Other Integrands and Integrals	245
8.4	Density Estimates for Minimizing Currents	250
9	Regularity of Mass-Minimizing Currents	255
9.1	Preliminaries	256
9.2	The Height Bound and Lipschitz Approximation	262
9.3	Currents Defined by Integrating over Graphs	269
9.4	Estimates for Harmonic Functions	272
9.5	The Main Estimate	286
9.6	The Regularity Theorem	303
9.7	Epilogue	308
Appendix		311
A.1	Transfinite Induction	311
A.2	Dual Spaces	313
A.3	Line Integrals	316
A.4	Pullbacks and Exterior Derivatives	319
References		323
Index of Notation		329
