Table of Contents

Session 1: High Speed Trains (I)

Environmental Noise Reduction of Tokaido Shinkansen and Future Prospect
H. Kanda, H. Tsuda, K. Ichikawa, S. Yoshida ............................ 1

Distortion of Compression Wave Propagating through Shinkansen Tunnel

The Influence of the Train Speed on Vibrations Due to High Speed Trains
G. Lombaert, G. Degrande, J. Bekaert ................................. 19

High Speed Train Noise Effects on Wildlife and Domestic Livestock
C.E. Hanson .......................................................... 26

Wind Tunnel Tests on the Control of Aeroacoustic Noise from High Speed Train
N. Yamazaki, T. Takaishi, M. Toyooka, K. Nagakura, A. Sagawa,
H. Yano .............................................................. 33

Session 2: High Speed Trains (II)

Measures to Counteract Micro-pressure Waves Radiating from Tunnel Exits of DB’s New Nuremberg-Ingolstadt High-Speed Line
Th. Tielkes, H.-J. Kaltenbach, M. Hicke, P. Deeg, M. Eisenlauer ......... 40

Acoustic Assessment of Micro-pressure Waves Radiating from Tunnel Exits of DB High-Speed Lines
K.G. Degen, Ch. Gerbig, H. Onnich ....................................... 48

High Speed Railway Noise: Assessment of Mitigation Measures
F. Létourneaux, J.F. Cordier, F. Poisson, N. Douarche .................... 56

Noise Measurement Results of Shinkansen High-Speed Test Train (FASTECH360S,Z)
Y. Wakabayashi, T. Kurita, H. Yamada, M. Horiuchi ...................... 63
Noise Sources for High Speed Trains: A Review of Results in the TGV Case
F. Poisson, P.E. Gautier, F. Letourneaux ........................................... 71

Session 3: Ground Borne Vibrations (I)

Survey of Metro Excitation Frequencies and Coincidence of Different Modes
S.J. Cox, A. Wang, A. Adedipe .............................................................. 78

Floating Slab Track above Ground for Turnouts in Tram Lines
H.-G. Wagner, A. Herrmann ................................................................. 86

Vehicle/Track Impact Due to Passing the Transition between a Floating Slab and Ballasted Track
Z.G. Li, T.X. Wu ...................................................................................... 94

Recent Developments in Operational Rail Noise and Vibration in NSW, Australia
D. Anderson, C. Weber ........................................................................... 101

Experimental Validation of a Numerical Model for Subway Induced Vibrations
S. Gupta, G. Degrande, G. Lombaert ...................................................... 108

A Numerical Model for Re-radiated Noise in Buildings from Underground Railways
P. Fiala, S. Gupta, G. Degrande, F. Augusztinovicz .............................. 115

Session 4: Ground Borne Vibrations (II)

The Influence of the Soil on Track Dynamics and Ground-Borne Vibration
L. Auersch ......................................................................................... 122

A User-Friendly Prediction Tool for Railway Induced Ground Vibrations: Emission — Transmission — Immission
W. Rücker, L. Auersch ........................................................................ 129

Using the PiP Model for Fast Calculation of Vibration from a Railway Tunnel in a Multi-layered Half-Space
M.F.M. Hussein, H.E.M. Hunt, L. Rikse, S. Gupta, G. Degrande,
J.P. Talbot, S. François, M. Schevenels .................................................. 136

Structure-Borne Noise and Vibration Control for Chatswood Interchange
J.T. Nelson, M. Harrison, M. Pettersson .................................................. 143
Measurements and Investigations at the Floating-Track-Bed System in the North-South Tunnel in Berlin
T. Jaquet, R. Garburg .................................................. 150

Propagation of Vibrations Due to a Tramway Line
M. Maldonado, O. Chiello, D. Le Houédec .............................. 158

Session 5: General Rolling Noise Aspects (I)

Railway Noise Statistics by Monitoring Stations – Input for Dutch Prediction Method RMR and Track Access Charging
E. Verheijen, M.S. Roovers, J.W. van den Brink ............................. 165

Measurement and Modelling of Noise from the Arsta Bridge in Stockholm
A. Wang, O.G. Bewes, S.J. Cox, C.J.C. Jones ............................ 172

Minimising Noise from Viaducts in the Borough Area of London for the Thameslink Programme
C. Cobbing, C.J.C. Jones .................................................. 179

The New German Prediction Model for Railway Noise “Schall 03 2006” – Potentials of the New Calculation Method for Noise Mitigation of Planned Rail Traffic
U. Moehler, M. Liepert, U.J. Kurze, H. Onnich .............................. 186

Floating Slab Track Re-engineering: Experience Drawn from a Completely Renovated FST Damaged by Major Flooding in Sao Paulo Metro
P. Carels, K. Ophalffens, P. Pinto, R. Kelly ................................. 193

Session 6: General Rolling Noise Aspects (II)

In-Car Noise and Carriage Floor Vibration on Different Track Forms and Curvatures in a Metro System
A. Wang, S.J. Cox, H. Huang, L. Liu, J. Jiang, J. Sun ......................... 201

Experimental and Theoretical Analysis of Railway Bridge Noise Reduction Using Resilient Rail Fasteners in Burgdorf, Switzerland
K.P. Köstli, C.J.C. Jones, D.J. Thompson ................................. 208

Comparison of Two Metrics for Assessing Human Response to Vibration
A Study on Source Mechanism in the Interior Noise Problem of High Speed Trains

Reducing the Noise Emission by Increasing the Damping of the Rail: Results of a Field Test
B. Asmussen, D. Stiebel, P. Kitson, D. Farrington, D. Benton.............. 229

Session 7: Cost Benefit Considerations of Noise Abatement

Railway Noise Abatement: The Case for Retrofitting Freight Vehicles with Composite Brake Blocks
J. Oertli ................................................................. 236

A Systematic Approach for Arriving at Reasonable Heights and Locations for Noise Barriers Adjacent to Railway Lines
C. Weber, K. Atkinson ............................................... 243

How Can Infrastructure Manager Influence Noise Generation of Rolling Stock
M.T. Kalivoda .............................................................. 250

Acoustic Effectiveness of Damped Wheels and Impact on Life-Cycle Cost of Different Typologies of Passenger Trains
A. Bracciali, S. Cervello, P. Gatti.................................... 257

Mitigation Measures for Open Lines against Vibration and Ground-Borne Noise: A Swiss Overview
R. Müller ................................................................. 264

Session 8: Prediction Tools and Theoretical Models (I)

Preliminary Analysis on Effect of Sleeper Pitch on Rail Corrugation at a Curved Track
X. Jin, Z. Wen, Q. Liu, Z. Zhou........................................ 271

A Hybrid Model for Noise Generation from a Railway Wheel Due to Wheel/Rail Impact
X. Xiao, X. Jin, X. Sheng ............................................. 278

A Time Domain Model for Wheel/Rail Interaction Aiming to Include Non-linear Contact Stiffness and Tangential Friction

Optimization of Track Parameters, Considering Their Physical Dispersion, to Minimize Rail Corrugation
O. Oyarzabal, J. Gómez, J. Santamaría, E.G. Vadillo .................... 292
Predicting the Effect of Temperature on the Performance of Elastomer-Based Rail Damping Devices
N. Ahmad, D.J. Thompson, C.J.C. Jones, A.H. Muhr ......................... 299

Estimation of Sound Transmission through Extruded Panels
Using a Coupled Waveguide Finite Element-Boundary Element Method

Session 9: Prediction Tools and Theoretical Models (II)

Squeal Prediction for a Bogied Vehicle in a Curve
Z.Y. Huang, D.J. Thompson, C.J.C. Jones .................................... 313

Synthesis of Noise of Operating Vehicles: Development within SILENCE of a Tool with Listening Features
E. Bongini, S. Molla, P.E. Gautier, D. Habault, P.O. Mattéi, F. Poisson ......................................................... 320

IMAGINE Rail Noise Sources – A Practical Methodology
M. Beuving, B. Hemsworth, R.R.K. Jones ................................. 327

Optimization of a Wheel Damper for Freight Wagons Using FEM Simulation
W. Behr, S. Cervello ............................................................... 334

Session 10: Grinding, Corrugation and Roughness (I)

Types of Rail Roughness and the Selection of Vibration Isolation Measures
H.E.M. Hunt ................................................................. 341

Rail Roughness Monitoring in the Netherlands
A.H.W.M. Kuijpers .......................................................... 348

Rail Roughness Level Assessment Based on High-Frequency Wheel–Rail Contact Force Measurements
Jens C.O. Nielsen ............................................................... 355

Session 11: Grinding, Corrugation and Roughness (II)

Testing the New Acoustic Rail Roughness Measurement Standard
C. Jones, P. Fodiman, F. Létourneau, B. Croft ................................. 363
Practical Implementations and Benefits of Highly Accurate Rail Roughness Measurements
S. Lutzenberger, P. Holm ........................................... 370

Session 12: New Noise Reduction Technologies (I)

New Rail Dampers at the Railway Link Roosendaal-Vlissingen Tested within the Dutch Innovation Program
E. van Haaren, G.A. van Keulen .................................. 378

Theoretical Study on Noise Reduction of Rail Component by Use of Rail Absorber
T.X. Wu ................................................................. 384

Reducing Wheel-Rail Interaction Forces and Roughness Growth by Application of Rail Dampers
B.E. Croft, C.J.C. Jones, D.J. Thompson ......................... 392

Session 13: New Noise Reduction Technologies (II)

Mitigation of Wheel Squeal and Flanging Noise on the Australian Rail Network
D. Anderson, N. Wheatley ......................................... 399

How to Avoid Squeal Noise on Railways State of the Art and Practical Experience
S. Bühler, B. Thallemer ............................................. 406

Noise Reduction Measures at Freight Train Locomotives “Blue Tiger”
C. Czolbe, M. Hecht .................................................. 412

Noise Reduction at Urban Hot-Spots by Vehicle Noise Control
U. Orrenius, S. Leth, A. Frid ........................................ 419

Poster Session

Directivity of Railway Rolling Noise
X. Zhang .............................................................. 426

Complex Eigenvalue Analysis of Railway Curve Squeal

Wave Propagation in Railway Tracks at High Frequencies
J. Ryue, D.J. Thompson, P.R. White, D.R. Thompson ........ 440
