

Contents

List of Abbreviations	xi
Notation	xiii
1 Introduction	1
1.1 Ambiguous and Uncertain Inference from Images	1
1.2 Monocular Human Pose Estimation	1
1.3 Contributions	2
1.4 Outline of the Thesis	3
2 Inference from Partial Measurements	5
2.1 Problem Statement	5
2.2 Related Work: Partial Observations	6
2.3 Inferring Missing Observations	8
2.3.1 Partial Observations as Affine Linear Subspaces	8
2.3.2 Combining Observation with Gaussian Prior Model	9
2.3.3 Unknown Alignment Transformations	10
2.3.4 Extension to Gaussian Mixture Models	11
2.3.5 Uncertainty in Observations	12
2.3.6 Working on a Low-Dimensional Subspace	13
2.4 Example Applications	15
2.4.1 3D Face Reconstruction	15
2.4.2 Body Pose Estimation	17
3 Statistical Approach to Tracking and Pose Estimation	21
3.1 Problem Statement	21
3.2 Related Work	25
3.2.1 Articulated Tracking	26
3.2.2 Learning Based Tracking	29
3.2.3 Multi-Person Articulated Tracking	35
3.2.4 Activity and Motion Recognition	36
3.2.5 Learning Methods	37
3.3 Proposed Overall Framework for Tracking and Pose Estimation	39

3.4	Representations	41
3.4.1	Body Pose Representations	42
3.4.2	Shape Representations	45
3.5	Training Data Sets	49
3.5.1	LocoETH Dataset	49
3.5.2	CMU MocapData	56
4	Combining Discriminative and Generative Inference in a Rao-Blackwellised Particle Filter	57
4.1	Introduction	57
4.2	Modelling and Learning	59
4.3	Bayesian Recursive Filtering	60
4.3.1	Monte Carlo integration	62
4.3.2	Analytical Pose Inference	63
4.3.3	Rao-Blackwellised particle filter	64
4.4	Implementation and Experimentation	67
4.4.1	Representations and Dimensionality Reduction	67
4.4.2	Dataset and Training	68
4.4.3	Tracking Experiments	68
4.5	Discussion	76
5	Generative Regression-Based Model for Pose Estimation	79
5.1	Introduction	79
5.2	Modelling and Learning	81
5.2.1	Relevance Vector Machines	82
5.2.2	Low-dimensional Pose Manifold	83
5.2.3	Temporal Prior	85
5.2.4	Appearance Model	86
5.3	Tracking and Pose Inference	87
5.3.1	On-Line Sample-Based Tracking	87
5.3.2	Off-Line Global Optimisation	90
5.4	Experiments	93
5.4.1	Empirical Ambiguity Analysis	93
5.4.2	Tracking Results	95
5.5	Discussion	102
6	Articulated Multi-Body Tracking Based on Gaussian Processes	105
6.1	Introduction	105
6.2	Modelling with Gaussian Processes	107
6.2.1	Gaussian Process Regression	107
6.2.2	Pose, Appearance and Dynamics	108
6.2.3	Learning the Embedding	110

6.3	Integrated Multi-Person Tracking System	111
6.3.1	System Overview	111
6.3.2	Multi-Body Tracker	112
6.3.3	Articulated Tracking	113
6.3.4	Guided Adaptive Segmentation	114
6.4	Experiments	115
6.5	Discussion	118
7	Inferring Activity Categories	121
7.1	Modelling and Learning	121
7.2	Tracking with Activity Recognition	122
7.3	Experiments	123
7.4	Discussion	125
8	Conclusion	129
8.1	Summary and Comparison of Frameworks	129
8.2	Perspectives	132
A	Equivalence of Gaussian Section and Gaussian Conditioning	135
	Bibliography	137
	Curriculum vitae	151
