# Table of Contents

Table of Contents

1 Introduction
   1.1 An Overview of the Carburizing Process
      1.1.1 Gas Carburizing
      1.1.2 Vacuum or Low Pressure Carburizing
   1.2 Objective
   1.3 Structure of thesis

2 Pyrolysis of Carburizing Gas
   2.1 Pyrolysis of Propane
   2.2 Pyrolysis of Acetylene
      2.2.1 Formation of Polycyclic Aromatic Hydrocarbons (PAHs) and Soot

3 Reactive Flow Modeling
   3.1 Governing equations
      3.1.1 Governing equations for mass, momentum and species
      3.1.2 Heat transfer
      3.1.3 Transport properties
      3.1.4 Thermodynamic properties
   3.2 Modeling Chemical Reactions
      3.2.1 Temperature Dependence of Rate Coefficients
      3.2.2 Pressure Dependence of Rate Coefficients

4 Computational Tools
   4.1 Introduction
   4.2 DETCHEM
      4.2.1 DETCHEM Structure
      4.2.2 DETCHEM Models
   4.3 HOMREA
      4.3.1 Sensitivity Analysis
      4.3.2 Reaction Flow Analysis
   4.4 FLUENT
      4.4.1 FLUENT structure
      4.4.2 Species transport and reaction model
      4.4.3 Solution Convergence in Reacting Flows
