# Table of Contents

## Oral Presentations

- One-Class Genetic Programming .................................................. 1
  *Robert Curry and Malcolm I. Heywood*

- Genetic Programming Based Approach for Synchronization with Parameter Mismatches in EEG .................................................. 13
  *Dilip P. Ahalpara, Siddharth Arora, and M.S. Santhanam*

- Memory with Memory in Tree-Based Genetic Programming ............. 25
  *Riccardo Poli, Nicholas F. McPhee, Luca Citi, and Ellery Crane*

- On Dynamical Genetic Programming: Random Boolean Networks in Learning Classifier Systems .................................................. 37
  *Larry Bull and Richard Preen*

- Why Coevolution Doesn’t “Work”: Superiority and Progress in Coevolution ............................................................. 49
  *Thomas Miconi*

- On Improving Generalisation in Genetic Programming .................. 61
  *Dan Costelloe and Conor Ryan*

- Mining Evolving Learning Algorithms ........................................ 73
  *Andrés Jód*

- The Role of Population Size in Rate of Evolution in Genetic Programming .......................................................... 85
  *Ting Hu and Wolfgang Banzhaf*

- Genetic Programming Crossover: Does It Cross over? .................. 97
  *Colin G. Johnson*

- Evolution of Search Algorithms Using Graph Structured Program Evolution .......................................................... 109
  *Shinichi Shirakawa and Tomoharu Nagao*

- Genetic Programming for Feature Subset Ranking in Binary Classification Problems .......................................................... 121
  *Kourosh Neshatian and Mengjie Zhang*

- Self Modifying Cartesian Genetic Programming: Fibonacci, Squares, Regression and Summing .................................................. 133
  *Simon Harding, Julian F. Miller, and Wolfgang Banzhaf*
Automatic Creation of Taxonomies of Genetic Programming Systems . . . 145
Mario Graff and Riccardo Poli

Extending Operator Equalisation: Fitness Based Self Adaptive Length Distribution for Bloat Free GP .................................................. 159
Sara Silva and Stephen Dignum

Modeling Social Heterogeneity with Genetic Programming in an Artificial Double Auction Market ..................................................... 171
Shu-Heng Chen and Chung-Ching Tai

Exploring Grammatical Evolution for Horse Gait Optimisation ............ 183
James E. Murphy, Michael O’Neill, and Hamish Carr

There Is a Free Lunch for Hyper-Heuristics, Genetic Programming and Computer Scientists ......................................................... 195
Riccardo Poli and Mario Graff

Tree Based Differential Evolution ..................................................... 208
Christian B. Veenhuis

A Rigorous Evaluation of Crossover and Mutation in Genetic Programming .......................................................... 220
David R. White and Simon Poulding

On Crossover Success Rate in Genetic Programming with Offspring Selection .............................................................................. 232
Gabriel Kronberger, Stephan Winkler, Michael Affenzeller, and Stefan Wagner

An Experimental Study on Fitness Distributions of Tree Shapes in GP with One-Point Crossover ..................................................... 244
César Estébane, Ricardo Aler, José M. Valls, and Pablo Alonso

Posters

Behavioural Diversity and Filtering in GP Navigation Problems.............. 256
David Jackson

A Real-Time Evolutionary Object Recognition System .......................... 268
Marc Ebner

On the Effectiveness of Evolution Compared to Time-Consuming Full Search of Optimal 6-State Automata .......................................... 280
Marcus Komann, Patrick Ediger, Dietmar Fey, and Rolf Hoffmann

Semantic Aware Crossover for Genetic Programming: The Case for Real-Valued Function Regression ........................................ 292
Quang Uy Nguyen, Xuan Hoai Nguyen, and Michael O’Neill
Beneficial Preadaptation in the Evolution of a 2D Agent Control System with Genetic Programming

Lee Graham, Robert Catral, and Franz Oppacher

Adaptation, Performance and Vapnik-Chervonenkis Dimension of Straight Line Programs

José L. Montaña, César L. Alonso, Cruz E. Borges, and José L. Crespo

A Statistical Learning Perspective of Genetic Programming

Nur Merve Amil, Nicolas Bredeche, Christian Gagné, Sylvain Gelly, Marc Schoenauer, and Olivier Teytaud

Quantum Circuit Synthesis with Adaptive Parameters Control

Cristian Ruican, Mihai Udrescu, Lucian Prodan, and Mircea Vladutiu

Comparison of CGP and Age-Layered CGP Performance in Image Operator Evolution

Karel Slany
