

CONTENT

1. Introduction	1
2. Literature review	3
2.1 Preservation of starter cultures by drying processes	3
2.1.1 Drying processes	3
2.1.2 Factors influencing viability	12
2.2 Mechanisms of dehydration inactivation during drying.....	30
2.3 Protection mechanisms of sugar during drying	35
2.3.1 Sugar as a compatible solute	35
2.3.2 Depression of membrane phase transition temperature	38
2.4 Current state of knowledge	42
3. Objectives and scientific approach	44
4. Experimental procedures	47
4.1 Outline of the experiments	47
4.1.1 Screening of the protectant	47
4.1.2 Inactivation mechanisms during drying	48
4.1.3 Protection mechanism of sorbitol	49
4.2 Materials and equipments	50
4.2.1 Biomaterial: <i>Lactobacillus helveticus</i> WS1032	50
4.2.2 Chemicals	50
4.2.3 Equipments	51
4.3 Methods for the preparation and drying of cells	54
4.3.1 Growing and harvesting of cells	54
4.3.2 Drying and rehydration	55
4.4 Analysis methods	57
4.4.1 Viability determination	57
4.4.2 Water content determination by gravimetric method	57
4.4.3 Water content determination by Karl Fisher titration	58
4.4.4 Water activity measurement	58
4.4.5 Determination of metabolic activity	59
4.4.6 Determination of cell integrity	60
4.4.7 Probing of bacterial components after drying	62
4.4.8 Atomic force microscopy (AFM)	63
4.4.9 Determination of membrane phase transition temperature	64
4.4.10 Measurement of glass transition temperature of sorbitol	65
4.4.11 Cellular fatty acid profile	66
5. Results and discussion	69
5.1 Screening of the protectant	69
5.1.1 Effect of added carbohydrates on cell viability	69
5.1.2 Drying and inactivation kinetics	71
5.2 Inactivation mechanisms during vacuum drying	73

5.2.1 Viability and expression of cell injury	73
5.2.2 FT-IR spectra of dried cells	76
5.2.3 Atomic force microscopy of the dried cells	83
5.3 Protection mechanisms of sorbitol	86
5.3.1 Optimal concentration of sorbitol	86
5.3.2 Changes in membrane phase transition temperature (T_m)	88
5.3.3 Interaction between sorbitol and membrane lipids	94
5.3.4 Tendency of sorbitol to form an amorphous glass	98
5.3.5 Alteration in cell membrane fatty acid composition	101
6. Conclusion and perspectives	109
7. Summary	112
8. Zusammenfassung	114
9. References	117
