I	Introduction	1
1	Motivation	3
1.1	Introduction	3
1.2	Goals and Requirements	6
1.3	A Guiding Example	8
1.4	Typographic Conventions	9
1.5	Reader's Guide	9
1.6	Further Reading	10
1.6.1	Product Data Management	10
1.6.2	Mass Customization	11
1.6.3	Product Lines	12
1.6.4	Reuse	13
II	State-of-the-Art	15
2	Structure-based Configuration	17
2.1	Introduction	17
2.2	Knowledge Representation and Reasoning	18
2.2.1	A Survey	18
2.2.2	Structure-based Knowledge Representation	20
2.2.3	Structure-based Reasoning	21
2.3	Classes of Configuration Problems	21
2.4	Further Reading	24
2.4.1	Product Modeling	24
2.4.2	Non-routine Configuration	25
3	Knowledge Representation	27
3.1	Introduction	27
3.2	Of Ontologies, Knowledge Bases and Configuration Models	29
3.3	Foundation for Configuration	32
3.4	Description Logics	34

3.4.1	The Knowledge Representation Language SWRL- <i>ALCQI</i> +(\mathcal{D})	34
3.4.2	The <i>ALCQI</i> +(\mathcal{D}) Component	34
3.4.3	The SWRL Component	36
3.5	Modeling Facilities	37
3.5.1	Concepts	38
3.5.2	Instances	39
3.5.3	Specialization Relations	39
3.5.4	Attributes	40
3.5.5	Composition Relations	41
3.5.6	Constraints	42
3.6	Building a Configuration Model	45
3.7	Reasoning	46
3.7.1	Configuration Process	47
3.7.2	Product Individuals	48
4	Evolution	49
4.1	Introduction	50
4.2	Evolution of Configuration Models	51
4.2.1	Changes	52
4.2.2	Types of Changes	53
4.2.3	Planning Evolution	55
4.3	Evolution of Products	55
4.3.1	Evolution of Configurable Products	55
4.3.2	Evolution of Product Individuals	56
4.4	Versioning	56
4.4.1	General Introduction	56
4.4.2	Modeling Versions	57
4.4.3	Versioning of Configuration Models	58
4.5	Further Reading	60
4.5.1	The “Classic” Categories of Evolution	60
4.5.2	Configuration Management	60
4.5.3	Belief Change	61
4.5.4	Database Schema Evolution	62
III	Conceptual Idea	63
5	The Knowledge Management Framework	65
5.1	Representing Products	65
5.1.1	Configurable Products	66
5.1.2	Modeling Products	66
5.2	Knowledge Management	72
5.2.1	Managing the Component Base	73
5.2.2	Managing Configurable Products	75

5.2.3	Interaction Between Managing the Component Base and Configurable Products	76
5.3	Preliminaries	78
5.3.1	Abstract and Concrete Concepts	78
5.3.2	General and Product-specific Constraints	79
5.3.3	Mapping	79
5.4	Consistency	81
5.5	Basic Inferences	83
5.5.1	Reasoning Tasks for Concepts	83
5.5.2	Reasoning Tasks for Conceptual Models	84
5.6	Invariant-based Consistency Checking	85
5.6.1	Invariants	85
5.6.2	Checking Consistency	92
5.7	Optimized Constraint Satisfaction	95
5.7.1	Types of Constraints	95
5.7.2	Solving Constraints	97
5.7.3	Optimizations	98
5.8	Specification of Change Operations	100
5.8.1	Semantics of Change Operations	101
5.8.2	Specification of Base Operations	103
5.8.3	Specification of Compound Operations	103
5.8.4	Compiling Compound Operations	104
6	Managing the Component Base	111
6.1	The Change Process	111
6.1.1	Change Identification	112
6.1.2	Compilation of Change Operations	113
6.1.3	Execution of Change Operations	114
6.1.4	Impact Evaluation	115
6.2	The Use Cases	117
6.2.1	Use Case 1: Defining Components	117
6.2.2	Use Case 2: Retiring Components	118
6.2.3	Use Case 3: Changing Components	119
6.2.4	Use Case 4: Managing Constraints	120
6.3	The Technical Questions	121
6.3.1	Which Configurable Products Are Affected By a Change?	121
6.3.2	Which New Components Become Available?	123
6.3.3	Which Components Are No Longer Available?	128
6.3.4	Can a Configurable Product Still Be Configured?	132
7	Managing Configurable Products	137
7.1	The Change Process	137
7.1.1	Differences Between the Processes	138
7.1.2	Impact Evaluation	139
7.2	The Use Cases	141
7.2.1	Use Case 1: Defining a Configurable Product	141

7.2.2	Use Case 2: Retiring a Configurable Product	144
7.2.3	Use Case 3: Changing a Configurable Product	144
7.3	The Technical Questions	146
7.3.1	Which New Components Are Required to Realize a Configurable Product?	146
7.3.2	Which Components Are Not Required for Any Configurable Product?	150
8	Interaction Between Managing the Component Base and Managing Configurable Products	155
8.1	The Use Cases	155
8.1.1	Use Case 1: Creating a Component Model From a Set of Configurable Products	156
8.1.2	Use Case 2: Identifying Required Components	160
8.1.3	Use Case 3: Checking Satisfiability of Components	161
8.1.4	Use Case 4: Influencing the Evolution of Configurable Products	163
8.2	The Technical Questions	165
8.2.1	Which Components Are Required for a Configurable Product?	165
8.2.2	Which Components and Constraints Are Related to a Configurable Product?	166
8.2.3	Which Attribute Values Are Consistent?	169
8.2.4	Which Property Values Are Common for a Set of Configurable Products?	171
IV	Outlook	173
9	Proof of Concept	175
9.1	Existing Tools	175
9.2	Prototype Implementation	177
9.2.1	Development Environment	177
9.2.2	Specifics of the Prototype	179
9.3	Experiments	181
9.3.1	Goals	182
9.3.2	Experiments Set-up	182
9.3.3	Test Data	183
9.3.4	Results	185
10	Summary	191
11	Scope of Applications	197
11.1	Product Domains	197
11.1.1	Suitable Product Domains	197
11.1.2	Unsuitable Product Domains	198

11.2	Limitations of the Framework	198
12	Future Work	201
12.1	Recommending Changes	201
12.2	Support for Additional Language Specifications	202
12.2.1	KONWERK and EngCon	202
12.2.2	Kumbang	203
12.2.3	Web Ontology Language (OWL)	204
12.3	Support for Procedural Knowledge	205
12.4	Versioning	206
A	Language Specification	211
B	Inconsistency and Repair	215
B.1	Invariants, Inconsistency and Repair	215
B.2	Repair Processes	223
B.2.1	Concept-related Changes	224
B.2.2	Attribute-related Changes	225
B.2.3	Composition-related Changes	227
B.2.4	Constraint-related Changes	229
B.2.5	Conclusion	231
