ABBREVIATIONS VII  
ABSTRACT X  
ZUSAMMENFASSUNG XII

1 INTRODUCTION 1  
1.1 *Salmonella* and salmonellosis 1  
1.2 *Salmonella* host cell invasion 2  
1.3 Intracellular growth of *Salmonella* 3  
1.4 Virulence determinants of *Salmonella* 5  
1.4.1 *Salmonella* Pathogenicity Islands 6  
1.4.2 Plasmid-encoded virulence genes 11  
1.4.3 Other virulence genes 11  
1.5 Regulation of virulence genes 13  
1.5.1 Environmental regulation 14  
1.5.2 Genetic regulation 14  
1.6 Flagellar regulon of *Salmonella* 22  
1.7 LysR family of transcriptional regulators 24  
1.7.1 Role of LrhA homologues in bacterial virulence 25  
1.8 Methods and tools for identification and characterisation of *Salmonella* virulence genes 26  
1.8.1 Methods for identification of new virulence genes 26  
1.8.2 Reporter systems 29  
1.8.3 Model systems for the study of *Salmonella* 30  
2 Rationale and Aims of Research 33  
3 RESULTS 35  
3.1 Identification and characterisation of novel *Salmonella* genes 35  
3.1.1 Role of novel *Salmonella* genes in host cell invasion *in vitro* 35  
3.1.2 Impact of *sinR* and *yciGFE* deletion on long-term persistence in mice 39  
3.2 Characterisation of LrhA and its roles in *Salmonella* virulence gene regulation 41  
3.2.1 Role of LrhA in *Salmonella* invasion of host cells 42  
3.2.2 Identification of LrhA targets by microarray analysis 45  
3.2.3 Impact of LrhA on the transcription of flagellar biosynthetic genes 47
3.2.4 LrhA is a negative regulator of motility in *Salmonella typhimurium*

3.2.5 LrhA expression is positively autoregulated

3.2.6 LrhA regulates the expression of two component system activators of *hilA* transcription.

3.2.7 LrhA regulates virulence genes encoded within multiple pathogenicity islands and throughout the *Salmonella* genome.

3.2.8 Loss of *hilA* expression is independent of Hha, StpA, CsrB/C and RfrA/B regulators.

3.2.9 LrhA directly interacts with the promoter regions of its target genes.

3.2.10 Production of LrhA is growth phase dependent

3.2.11 *In vivo* characterisation of *lrhA*

4 DISCUSSION

4.1 Contribution of new virulence genes to *Salmonella* virulence

4.2 LrhA as a global regulator of *Salmonella* virulence gene expression

4.3 Outlook

5 METHODS

5.1 Molecular biology methods

5.1.1 DNA isolation

5.1.2 Isolation and concentration of DNA from aqueous solutions

5.1.3 RNA preparation

5.1.4 Determination of RNA quality

5.1.5 Electrophoresis and detection of nucleic acids on agarose gels

5.1.6 Determination of concentration of nucleic acids

5.1.7 Microarray analysis of gene expression

5.1.8 Construction of deletion mutants

5.1.9 Bacteriophage

5.1.10 DNA sequencing

5.1.11 Restriction digestion of DNA

5.1.12 Polymerase chain reaction (PCR)

5.1.13 Ligation

5.1.14 Construction of plasmids

5.2 Microbiological methods

5.2.1 Protein methods

5.2.2 β-galactosidase assay
